

« Building climate change resilience for WASH services with efficient Disaster Risk Reduction strategies »

Saturday 11 November / 10:00-11:30

European Pavilion, Tallinn room — Bonn Zone

This event organized by the working group « Emergency, Reconstruction, Development » of the French Water Partnership will remind that in a context of climate change, water, sanitation and hygiene (WASH) services are strongly impacted by natural disasters. Ensuring rapid recovery of WASH services as well as designing systems that address vulnerabilities is fundamental for the concerned populations. The event will provide a state of play on Disaster Risk Reduction (DRR) and present DRR practices implemented by humanitarian actors in the field of WASH. Recommendations for humanitarian, development and climate change practitioners will be shared to better integrate DRR approaches into WASH national and local strategies.

Introduction Jean Luc Redaud, President of the Water and Climate Working group, FWP

Moderation Willy Missack, wash and climate change coordinator, CARE Vanuatu (tbc)

PART 1 : DISASTER RISK REDUCTION (DRR) AND WATER AND SANITATION SERVICES (WASH): INTERLINKAGES AND MAIN ISSUES
